National Audubon Society Field Guide To North American Birds, Western Region

Synopsis

Introduced in 1977 and completely revised in 1994, these bestselling photographic field guides have become the birding bibles of more than four million enthusiasts. Virtually every bird found in North America is brought to life in a full-color photograph and with textual information on the bird's voice, nesting habits, habitat, range, and interesting behaviors. Accompanying range maps; overhead flight silhouettes; sections on bird-watching, accidental species, and endangered birds make these the most comprehensive field guides to birds available. Note: the Western Edition covers the Rocky Mountain range and all the states to the west of it, while the Eastern Edition generally covers states east of the Rocky Mountains.

Customer Reviews

The National Audubon Society has long been respected as, among other things, the publisher of a series of top-notch field guides to the natural world in North America. Their volumes include birds, trees, butterflies, insects and spiders, wildflowers, mammals, rocks and minerals, mushrooms, fish... you name it. Several of the books are specific to geographic regions. This review is of the National Audubon Society FIELD GUIDE TO BIRDS - WESTERN EDITION. This book is compact; it measures 4" x 7-1/2" x 1-1/2" thick, just the right size to fit into your pocket or day-pack if you're inclined to take it on a walk. It's very thoughtfully and logically organized with four major sections, as follows: INTRODUCTION This includes a discussion of both the art and science of birding and the organization of the book. It includes a highly detailed rendering of a "typical" bird with all the anatomical points used in the book identified by their common names. ORGANIZATION The avian

kingdom is broken down into categories (long-legged waders, gull-like birds, owls, pigeon-like birds, hawks, tree-clinging birds, hummingbirds, perching birds, and so on.) Each category is assigned a silhouette. The categories are further broken down into families. So, in the category of hawks, we have ospreys, caracaras, vultures, hawks, falcons, harriers, kites, and eagles. Each family has its own silhouette symbol. COLOR KEY Each color plate page has a thumb index with the silhouetted symbol for the birds on that page. The birds are arranged within their families by their predominant color, and the silhouettes are colored accordingly, to make it even easier to find your bird. COLOR PLATE This is a series of color photographs of 676 birds.
