Customer Reviews

This text is basically a large and detailed taxonomic key of freshwater fishes found in North Carolina. The book details taxonomic differences, similarities, and distribution ranges of species, grouped by family. Greytone pictures of the fish are provided along with a statewide distribution map. Not much in the way of sampling methods or general descriptions of habitat preference. This book is for people very interested in taxonomy. Overall, a very comprehensive text.

Very useful book! Definitely the best available focusing on NC natives. Would like to have descriptions of habitat and of their other attributes (diet, etc). Overall a great text!
