Tasmanian Devil: A Unique And Threatened Animal

Synopsis

Packed with information that has only been published in scientific journals, if ever at all, this collection of biological facts challenges the misconceptions associated with Australia's most famous marsupial. Far from being a scavenging, ferocious oddity, an image perpetuated by the infamous cartoon character, the Tasmanian Devil is actually a treasured and valuable wildlife species facing extinction. By sharing the surprising, controversial, funny, and tragic history behind the world's largest marsupial carnivore, this new guidebook covers all aspects of the biology and the habitat of the Tasmanian Devil.

Customer Reviews

Tasmanian Devil by David Owen and David Pemberton is a well-illustrated and researched overview of the natural and human history of the largest living marsupial carnivore. After the introduction the first chapters of the book focus on the animal's natural history, the authors taking care to dispel popularly held myths about the animal. Devils are opportunistic feeders, eating live prey and carrion as well as invertebrates, fruit, and vegetation. A solitary hunter, they aren't fast enough to chase down wallabies or rabbits but do go after wombats (though some researchers have reported that they can chase prey at about 12 kilometers per hour for short bursts). They have tremendous jaw strength and powerful teeth that enable them to consume gristle, skin, and shatter bones (the equivalent of a dog four times their size or for their body mass more powerful than a tiger's). Though usually solitary, devils feed communally on particularly large carcasses. Often

described as being some sort of free-for-all with lots of screaming and apparent fighting, devils in fact have elaborate vocalizations and postures to maintain order and some speculate that just as the sight of daylight-circling vultures attracts other vultures the noises devils make may serve to alert other devils in the area to a large food source. The first arrival is the dominant feeder, making way for a challenger once it has gorged itself, the feeder defending only the amount of food it needs, not the entire carcass. Devils will generally seek to take what they can and hide with their share, consuming it in peace. Though maligned by ranchers, the devils are the "great hygienists" of the Tasmanian bush.
