Customer Reviews

The value of this book can be measured by the results that "best-in-class" companies have produced by adopting its tools and methods. Operators can reduce capital costs by 13%, increase sales revenue by 9.8% by debottlenecking capacity, and lower total operating cost by 1%. The total

benefit rolls up to a 3.8% increase in Economic Value Added (higher on greenfield capital projects, and lower on existing infrastructure). The book also balances cost objectives by defining and explaining the important safety and environmental standards that must be implemented throughout the extended supply chain in any operator or supplier. If you are managing a capital project or efficiency improvement program in the oil, gas, or power industries, you should definitely read this book.

This is a good book and an easy read. The chapters are optimally categorized to convey very valuable and practical information.
